

Tutorial 1 - Questionnaire

Tutorial 1 is designed to help first year, first semester students (many of which have no previous experience with code) ready to build basic android applications. We'd like to ask a few questions regarding your experience with this tutorial.

Based on this tutorial - what are your first impressions of this course?

This course is a lot more relevant to computer science & software engineering than GENG1803. Learning basic android app development would be very enjoyable.

What did you think of the helloPurr exercise? Note that this should be considered in the context of a "hello world" exercise. It is just to get the environment setup and working. Do you think it reasonable students will have this running within the 2 hours?

The helloPurr exercise was very good at familiarising with the user interface. It could definitely be completed within the 2 hours.

Do you think this tutorial has too much information/too little information?

The tutorial is very detailed, which would be very helpful to someone with no prior coding experience.

Were there any parts of the tutorial where you felt frustrated or stressed with the material? If so, please comment. It is possible we need to include more information regarding this aspect.

I had a bit of trouble getting loops to work within app inventor but apart from that, everything was great.

Any other comments:
