

Tutorial 1 - Questionnaire

Tutorial 1 is designed to help first year, first semester students (many of which have no previous experience with code) ready to build basic android applications. We'd like to ask a few questions regarding your experience with this tutorial.

Based on this tutorial - what are your first impressions of this course?

Very interesting and fun. It's a course I actually feel like doing. Compared to GENG1803 – I didn't really have the motivation to do the course. I feel like this would be a great start for first year students.

What did you think of the helloPurr exercise? Note that this should be considered in the context of a "hello world" exercise. It is just to get the environment setup and working. Do you think it reasonable students will have this running within the 2 hours?

Yes, students should be able to have the exercise done within two hours, as the tutorial is pretty straight forward. I was a little lost between the cheatsheet and tutorial at first, but I figured. HelloPurr is a great start for showing how things can work together rather than just printing out "Hello World"

Do you think this tutorial has too much information/too little information?

Just the right amount of information :D

Were there any parts of the tutorial where you felt frustrated or stressed with the material? If so, please comment. It is possible we need to include more information regarding this aspect.

Not really. Though, students might feel they have to go through several pages/links in order to get started.

Any other comments:

I feel that this course will be really great, especially if students can see that they are creating stuff and if they put their minds to it. You're a great inspiration and help to students. Keep up all the good and hard work you do! :)
